

Kartup

Kartup cart lifts and lowers the kart without any physical effort through a 24 Volt C.C. electric command.

Thanks to its simplicity it can be used by anybody and with any model of kart.

This cart not only serves to move the kart but it can also be used as base of work for the maintenance and the starting of the kart.

The Kartup is the only one to lift the kart engaging the frame, so that it does not damage the bumper and during maintenance with raised kart can be removed at any time the bumper without any impediment.

Kartup is produced with high quality materials and it does not need any maintenance.

When closed its encumbrance is very small as it not only can be closed on itself but some parts can also be released to further reduce its volume and facilitate the loading of Kartup on your means of transport.

Kartup is produced in two versions: galvanized gold and galvanized silver.

This is a Patent and Certificate Model.

Technical data:

Tubular steel structure.

Floor in aluminium sheet.

Folding tool holder for maintenance.

Adjustable brackets for kart hookup for any kind of frame.

Folding and dismountable load-bearing brackets.

Folding helm with electric command to lift/lower.

N.2 Batteries.

Battery charger.

Fixed wheels size Ø 260x85.

Rotating wheels size Ø 100x30.

Weight: 35 Kilos including batteries and battery charger 220/24 Volt C.C.

Size of closed Kartup: mm 900x800x390H.
